PROFESSIONAL SUMMARY

Dynamic Software Engineering undergraduate with expertise in designing and developing scalable full-stack web and cross-platform mobile applications. Proficient in modern JavaScript frameworks (MERN/PERN, React Native) and robust database architecture. Recognized for delivering secure, optimized, and user-centric software solutions.

EDUCATION

University of Management and Technology (UMT)

Bachelor of Science in Software Engineering (6th Semester)

Lahore, Pakistan

Expected Nov 2027

TECHNICAL SKILLS

Languages:	JavaScript (ES6+), HTML5, CSS3, SQL
Frameworks & Libraries:	React.js, React Native, Node.js, Express.js, Tailwind CSS
Databases:	MongoDB, PostgreSQL (Neon DB), Relational Database Design
Tools & Platforms:	Git, GitHub, VS Code, Cursor, Visual Studio, Android Studio, Postman, Expo Go, RESTful APIs, AI Tools (Devin, Kiro, Antigravity)

PROJECTS

Cross-Platform Mobile Wallet | *React Native, Expo Go, PostgreSQL, Neon DB* **2026**

- Architected a responsive mobile wallet application for iOS and Android using React Native and Expo Go, ensuring seamless user experiences and intuitive UI/UX navigation.
- Integrated a Neon Serverless PostgreSQL database to securely manage user ledger balances and transaction histories with real-time data synchronization.
- Implemented asynchronous storage and custom state management mechanisms to provide live financial tracking and persistent data updates.

Flash AI Platform | *PERN Stack, PostgreSQL, Express, React, Node.js, Tailwind CSS* **2026**

- Developed a scalable full-stack application leveraging the PERN stack, engineering a robust relational database architecture to support complex data relationships.
- Built responsive, high-fidelity UI components optimized with Tailwind CSS to deliver smooth client-side interactions and modern layouts.
- Engineered a comprehensive Node.js/Express API layer equipped with resilient error handling and secure client-server communication protocols.

Employee Management System | *MERN Stack, MongoDB, Express, React, Node.js, JWT* **2025**

- Designed a secure administrative portal featuring custom MERN authentication logic and role-based access control (RBAC) to restrict unauthorized routing.
- Hardened API endpoints utilizing JWT authentication and bcrypt password hashing to protect sensitive organizational records and employee data.
- Optimized MongoDB CRUD operations and aggregation pipelines to enable efficient dynamic lookups and seamless employee record management.

Full-Stack E-Commerce Platform | *MERN Stack, Tailwind CSS, Postman* **2025**

- Constructed an end-to-end e-commerce solution featuring dynamic product listings, secure user authentication, and fully integrated shopping cart workflows.
- Developed modular, reusable React components coupled with efficient state management and secure backend API integration.
- Validated all RESTful endpoints via Postman, ensuring robust server communication and comprehensive error handling across the application.
